Description

DECA Microprocessor controlled Inverter Maintenance battery charger with pulse recharge programme. This automatic charging unit is suitable for lithium-ion batteries, Lead, WET Servicable, and Maintenance Free Batteries for motorbikes, cars, vans, boats etc. Safety features include protection of the vehicle electronics, accidental connection on reverse polarity and IP65 protection for outdoor use, now also CANbus BMW programme for keyless activation use. The high efficiency "I-U" charging characteristic minimises battery charging time and the Floating Charge feature allows the battery to remain constantly connected to the vehicle electrical system and ready for immediate use through the pulsed charge feature. An additional novel feature allows for regeneration of batteries that have undergone heavy discharge cycles (except lithium programmes). Finally, the charger also incorporates testing features for battery output, starting motor and alternator making it the ideal combination unit.

DECA SM LITHIUM - SPECIFICATION

Primary Input 1-Phase 230V

Power.....60W

Charging output.....12V

Charging steps5

Charging current (Max)...3.6A

Battery Capacity..... 1.2-120Ah

Protection.....IP65

Dimensions.....200 x 90 x 45mm

Weight.....0.65kg
